

QUICK-MARK™

.... in house labels, signs and front panels.

- Metal or Plastic
- High-Tack Adhesive
- Non-chemical processing
- Negative or Positive Results (You Choose) !
- No over-lamination required
- Durable - up to 5 Year External Life
- Low Cost with High Quality
- Use computer generated originals
- Vast Colour Combinations

QUICK-MARK™

QUICK-MARK™ Imaging Films 12" x 20" (305 x 508mm) sheets, 5 per pack.

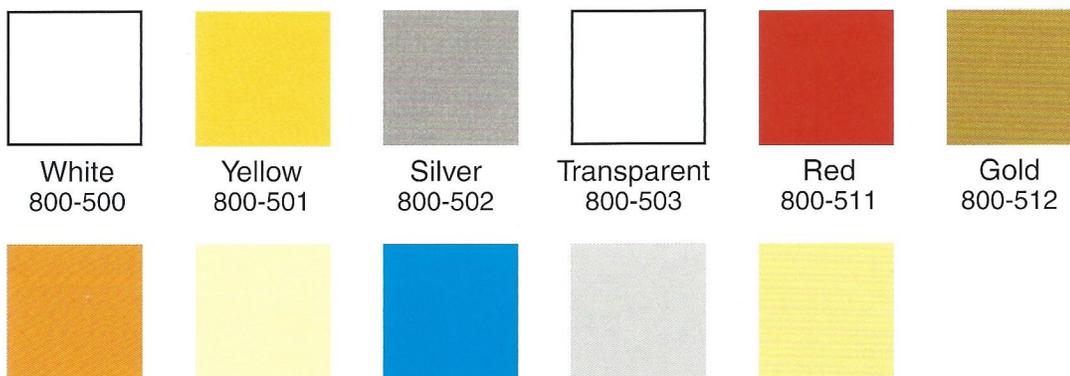

Black 800-400 Dark Blue 800-401 Red 800-402 Green 800-403 Light Blue 800-404 Brown 800-405 White 800-406

Due to the limitations of the printing process, accurate colour reproduction cannot be guaranteed. The translucent nature of the Imaging Films also means the final label colour may vary depending on the Base Sheet selected.

QUICK-MARK™ Imaging Films are available in seven different colours. The film consists of a coloured emulsion sandwiched between two layers of transparent polyester carrier film. Processing is via a non-chemical dry peel technique. When UV is applied to the imaging film with an artwork, the coloured emulsion actually exposed is transferred to the top piece of film. This will be a reversed image of the artwork and the bottom piece of film will be a positive duplicate of the artwork.

QUICK-MARK™ Base Sheets 12" x 20" (305 x 508mm) sheets, 5 per pack.

White 800-500 Yellow 800-501 Silver 800-502 Transparent 800-503 Red 800-511 Gold 800-512

Orange 800-513 Beige 800-514 Blue 800-515 Aluminium 800-504 Gold Aluminium 800-506

Due to the limitations of the printing process, accurate colour reproduction cannot be guaranteed.

There are nine plastic Base Sheets and two aluminium. All Base Sheets have a double sided adhesive coating. The top face adhesive is used for lamination of the processed Imaging Film and the rear adhesive for mounting on final location.

QUICK-MARK™ Over-Laminating Film 12" x 20" (305 x 508mm) sheets, 5 per pack.

When the final label has the Imaging film Emulsion on the top surface a protective over-laminating film should be applied. Three films are available, Gloss, Matt and Lexan Polycarbonate. The Matt and Lexan films can also be used to alter the appearance of the normally gloss, Imaging Film.

Transparent Gloss = 800-600

Matt = 800-601

Lexan = 800-605

QUICK-MARK™ Accessories

Peeling Board 800-301 = 10" x 12" (254 x 305mm)
800-300 = 12" x 20" (305 x 508mm)

An essential aid to help peel apart the Imaging Film.

Processing Tray 800-305

A specially moulded flat tray to help the wet lamination of the Imaging Film to the Base Sheets.

PA1 Applicator 800-143

Used in the lamination process as an aid to squeegee fluid out between the Imaging Film and Base Sheet.

HB104 Pads 800-049

A pack of a 100 pads used to put over the edge of the PA1 to give a softer laminating surface.

Application Fluid 800-308

The fluid used for the wet lamination of the Imaging Film and Base Sheet. Solution to make 1 litre.

LaserStar

A special polyester film to print artworks from a Laser printer.

A range of UV exposure units, cutters, shears and corner rounders are also available.
